ISEAS International Society of Education in Animal Sciences

The swot matrix to train students' decision-making
– AN ONLINE WORKSHOP

AUTHOR: Prof. Rita Payan Carreira, PhD (University of Évora, Portugal)

DESCRIPTION

Selection of the best treatment for a given condition may depend on different factors, either related to the patient or the environment. The ability to take into consideration these factors when deciding which treatment to recommend is one important aspect of clinical reasoning. This is also a difficult competence to develop in the medical students. This learning approach contributes to translate medical evidence into the analysis of the problem and would also help the students to gather the necessary information to discuss their therapeutical options with the client. Therefore, learning activities using the production of Swot matrices may allow to enhance decision-making competence and provide students with decision-making heuristics. During this presentation, we will cover the developed of the activity in students of the 7th semester of the Veterinary Medicine Programme at University of Évora (in animal Reproduction and Gynaecology and Obstetrics topics), and discuss some perceived difficulties and advantages of this strategy.

STRUCTURE OF THE WORKSHOP: 2 hours presentation

DATE AND TIME: January 2023 (exact date TBA on Facebook and Twitter)

PRICE: 5€ for ISEAS members

PLATFORM: ZOOM or MS Teams (link and password will be sent to participants' email before the workshop)
