

New ways of teaching methodology in Veterinary Medicine

AUTHOR: Marco Wochnik, DVM; (Faculty of Veterinary Medicine, Lublin, Poland)

Collaborators: Roman Dąbrowski, PhD, associate professor; prof. Leszek Krakowski, PhD; Marek Szczubiał, PhD, associate professor; Piotr Brodzki, PhD, associate professor; Tomasz Piech, PhD (Faculty of Veterinary Medicine, Lublin, Poland)

DESCRIPTION

Nowadays, one of educators duties is to search and apply new teaching methodologies to increase knowledge assimilation and needed skill obtaining by the students. One of such new method is The Peyton's 4-step.

Such a method can help to teach student how to perform safety and properly clinical examination of synthetic cadaver first and only then on live animals. It can be useful to show them; vaginoscopy, rectal examination, place IV catheter, place the endotracheal tube on phantom and even how to solve the delivery and many other clinical procedures.

We hope that this lecture will encourage you to implement this teaching method in your University and students will benefit from this for sure.

STRUCTURE OF THE WORKSHOP (total 2 hours)

1. Online presentation with short films (45 min.)
2. Discussion and questions (15 min.)
